Agenda #	Relate To	Position	Name	Comments	Attachment
14.		Favor	Bob Buckner	As a resident of LA County I am deeply concerned about the future we are leaving our children. Stopping the automatic installation of gas burning appliances is an important way to stop burning fossil fuels. An appliance installed in a home can be a 50 year commitment to emitting green house gasses. Thank you thinking about the future.	No
			Elise Kalfayan	We need to transition away from polluting, fossil fuels as quickly as possible. LA County has a real opportunity to improve the health and safety of our homes and buildings by supporting an all-electric building standard. Recent studies have shown that kids who grow up in homes with gas stoves are more likely to develop asthma. Gas infrastructure is also more dangerous during earthquakes, fires, and other natural disasters. This has been a great concern for me as we've actually seen several incidents due to gas leaks over the years in California.	No
			Jennifer Ho	Hi. Growing up in Los Angeles, I developed asthma and other respiratory conditions despite no family history. I can actually smell the pollution when I'm outside. I would like to see better health outcomes for our community. LA County has an opportunity to improve the health and safety of our homes and buildings by supporting an all-electric building standard. Recent studies have shown that kids who grow up in homes with gas stoves are more likely to develop asthma. Gas infrastructure is also more dangerous during earthquakes, fires, and other natural disasters. Please make a comprehensive, immediate, and equitable transition to clean and renewable energy sources. Thank you for your time and consideration.	No
			Laura Gladwin Payn	I wholeheartedly support the transition to all-electric building codes for new construction. This step is extremely important for our transition away from fossil fuels and for the health and safety of Los Angeles residents. As a mother of a young child, I am constantly worried about the indoor and outdoor pollution that my daughter is exposed to. We should not have harmful gas burning inside our homes and polluting our indoor air even more than the already high levels of pollution outside. Also, we must do everything we can to stop using fossil fuels and hopefully prevent the very worst effects of climate change.	No
